

THE FOUNDING PRINCIPLES OF VERITA

ratified in the year 2026, witnessed by eighty-two tests

We, the builders of Verita, in order to form a more perfect solution, establish reliable functionality, ensure graceful failure handling, provide for the common user experience, promote general maintainability, and secure the blessings of clean code to ourselves and our posterity, do ordain and establish this Constitution for Verita.

ARTICLE I — ON USER EXPERIENCE

The first hour of analytical labour, being repetitive and beneath the dignity of the analyst, shall be abolished. One file drop shall summon a dashboard; said dashboard shall obey the user's hand in all matters of arrangement.

ARTICLE II — ON DATA INTEGRITY

No metric shall be fabricated, hardcoded, nor conjured by chance. Every number displayed shall be computed from the user's own data at the moment of asking, and shall, upon petition, confess the exact formula of its making.

ARTICLE III — ON GRACEFUL FAILURE

When errors arise — and they shall — the system shall fail as a gentleman: with a clear message, a proper status code, and no stack trace exposed to public view. The emergency exits shall remain lit at all times.

ARTICLE IV — ON AI COLLABORATION

The Machine shall narrate; the Engines shall compute. No output of the Machine shall ship unverified, and the judgment of the human shall bind in all disputes. The division of their labours shall be published openly, without shame.

ARTICLE V — ON DOCUMENTATION

That which is built and not documented shall be deemed not built. Every claim shall carry its evidence; every limit shall be confessed before the asking; every map shall mark its dragons by name.

ARTICLE VI — ON FUTURE IMPROVEMENTS

Version Two is hereby acknowledged a citizen in waiting — its engines (SHAP, XGBoost, Optuna) already resident within requirements.txt — and shall be admitted upon the same oath: honest selection, held-out judgment, work shown.
