SURVEYED &
VERIFIED

PERIODIC TABLE OF VERITA

ALL KNOWN ELEMENTS AS OF 2026 · ATOMIC NUMBER = ORDER OF ADOPTION · WEIGHT = ROLE IN THE SYSTEM

1 Py PYTHON the atmosphere itself	5 Sk SCIKIT-LEARN 0.913 held-out	9 Dk DOCKER ships five at once	7 Db DUCKDB dissolves SQL instantly	22 Ec ECHARTS glows on canvas	27 Pt PYTEST 72 reactions/run
2 Fa FASTAPI wt. every request	6 Sc SCIPY emits p-values	10 Ga GH ACTIONS reacts to pushes	8 Pg POSTGRES inert; never forgets	23 Tj THREE.JS 2,600 particles	28 Vt VITEST 10 more
3 Pd PANDAS wt. every dataframe	11 Ag THE AGENT * chains itself	16 Pr PROMETHEUS measures everything	12 Sa SQLALCHEMY binds Py to Pg	24 Fm FRAMER springs, never bounces	29 Hy HYPOTHESIS V2 reagent
4 Np NUMPY the substrate layer	19 Gm GEMINI optional isotope	17 Gf GRAFANA makes metrics visible	13 Ox OPENPYXL digests spreadsheets	25 Zu ZUSTAND 1 kB of state	30 Sh SHAP V2: explains Sk
14 Re REACT 18 wt. the whole face	20 Cl CLAUDE synthetic mentor*	18 Uv UVICORN carries the server	21 Jb JOBLIB preserves the model	26 Gl GRID-LAYOUT drag without tears	31 Op OPTUNA V2: tunes Sk
15 Ts TYPESCRIPT bonds break loudly					

GROUPS: NOBLE CORE AI METALS INFRA DATA HALOGENS UI LANTHANIDES TEST SERIES

**Element Cl (Claude) is currently classified as Synthetic but exhibits properties of Natural Intelligence. Highly reactive with element 20's neighbor, the human operator; all compounds formed were peer-reviewed before release. No stable bond forms without verification energy.*

Elements 29–31 already present in the laboratory (requirements.txt), scheduled for fusion in V2.

VERITA HOUSE — FLOOR PLAN

DRAWING NO. V-001 · 1 UNIT = 1 MODULE · ALL CORRIDORS CARRY JSON

windows: REST API (light enters as JSON)

GEMINI PAVILION

optional · bridge may close

covered walkway

mezzanine: 82 test sentinels patrol all rooms below

PROFILING ROOM

semantic typing
quality grading
scipy instruments

SQL TAP ROOM

DuckDB on tap
SELECT-only service hatch
bouncer reads every order

AI ANNEX

RESTRICTED ACCESS
risk model · investigator
visitors must show evidence

NLP STUDY

BSA · AML · OFAC
reads narratives aloud

STUDIO HALL

editable canvas · 12 exhibits

* sealing press operates here
(SHA-256, links fold in links)

THE LOBBY

FastAPI reception
security desk: API key · rate limit
concierge: OpenAPI /docs

OBSERVATORY

Prometheus telescope
Grafana skylight

reception

emergency exits: GRACEFUL FAILURE — global error handler, no stack traces escape the building

FRONT ENTRANCE

React + TypeScript · double doors, always open

LOWER LEVEL — DATA STORAGE

PostgreSQL vault: audit trail, append-only · disk-backed dataset cellar (survives restarts)
joblib cold room: the model sleeps at 0.36s readiness · nothing down here ever forgets

orientation: all data flows north-to-south;
all evidence flows to the basement, forever

PostgreSQL · forever

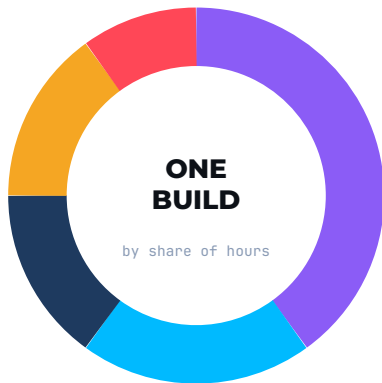

SHIPPING DOCK

OUT TODAY: 1 editable dashboard · 1 ranked alert queue
1 cited compliance memo · 1 tamper-evident chain · 0 black boxes

Factory inspection note: every machine shows its work order on request.
The inspector is welcome any day. The inspector is the point.

HOW AI WAS USED

THE COMPLETE PICTURE — VOLUNTEERED, NOT EXTRACTED

- 40% implementation drafting — AI-led, human-reviewed
- 20% debugging — paired
- 15% research & explanation — AI-led
- 15% architecture & judgment — human only
- 10% verification & testing the AI — human only

WHAT CLAUDE CODE DID

Generated boilerplate and first drafts of modules
Suggested patterns and library candidates

Wrote documentation drafts
Debugged errors alongside me

Explained unfamiliar tools and concepts

Drafted code that twice was confidently wrong

WHAT I DID

Designed the architecture and every module boundary
Chose which patterns fit, rejected the rest, owned trade-offs

Edited, fact-checked, and signed every claim

Understood root causes; turned two of them into permanent tests

Re-derived them until explainable line-by-line, AI absent

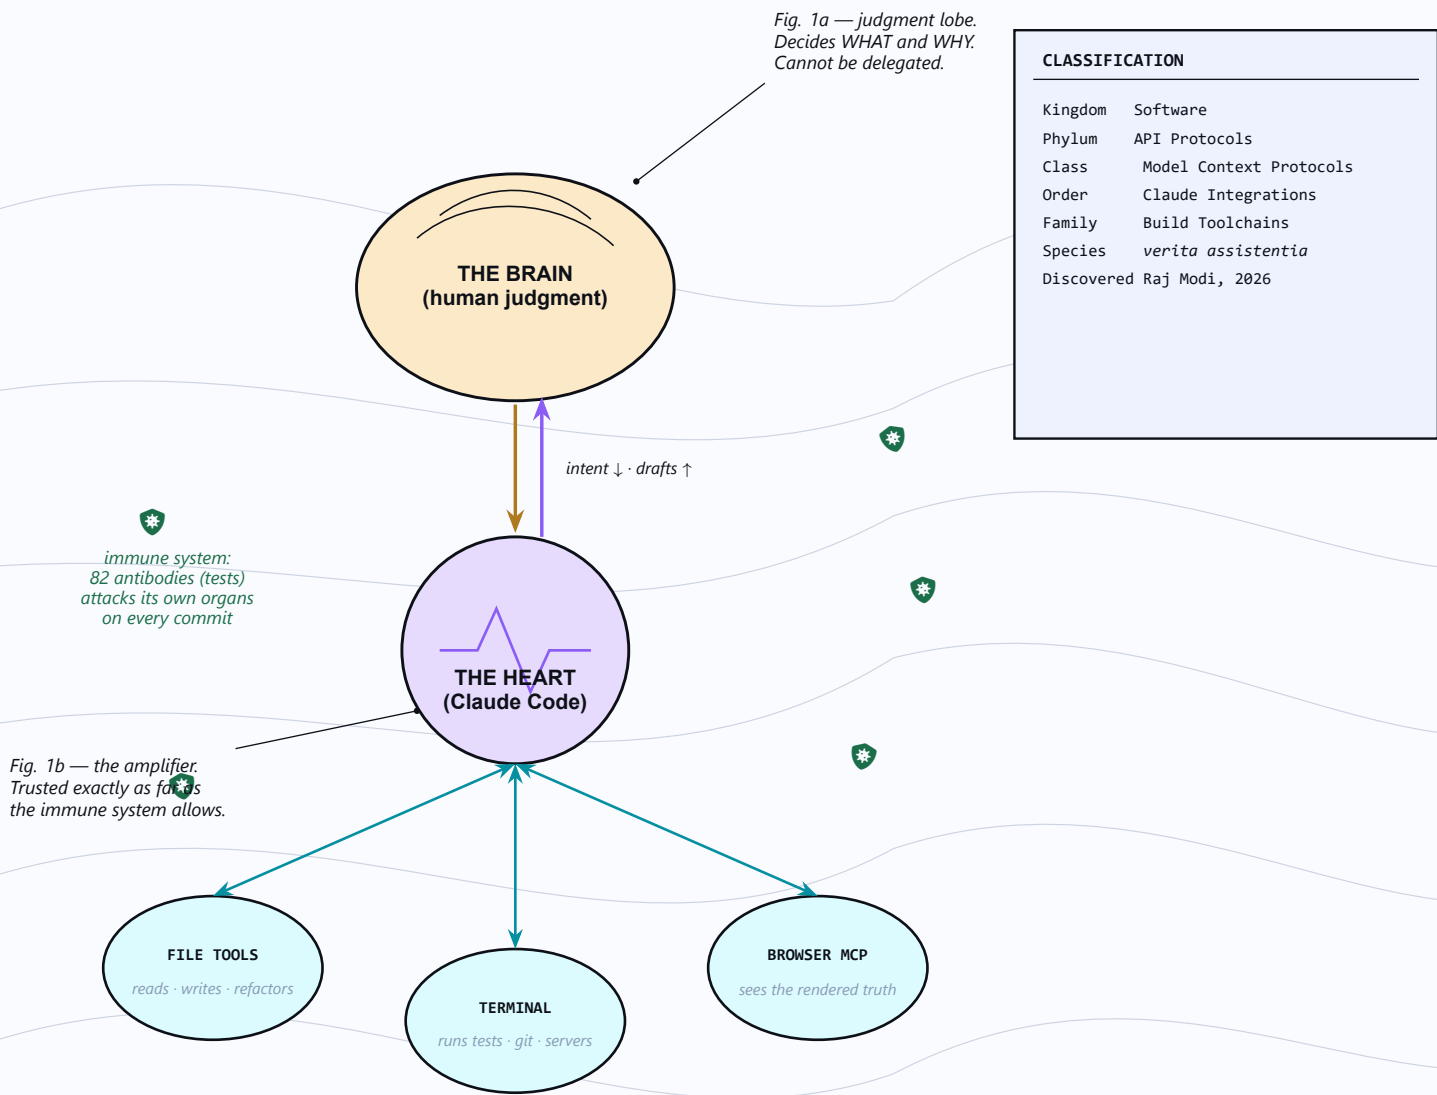

Caught both: a failing SQL guard, a training-set metric swap

Every AI output was reviewed. Every decision was mine.

The judgment in this project is human. The speed is not.

PLATE VII — ANATOMY OF THE AI-ASSISTED BUILD

Fig. 1. The organism in cross-section, with the Model Context Protocol dissected

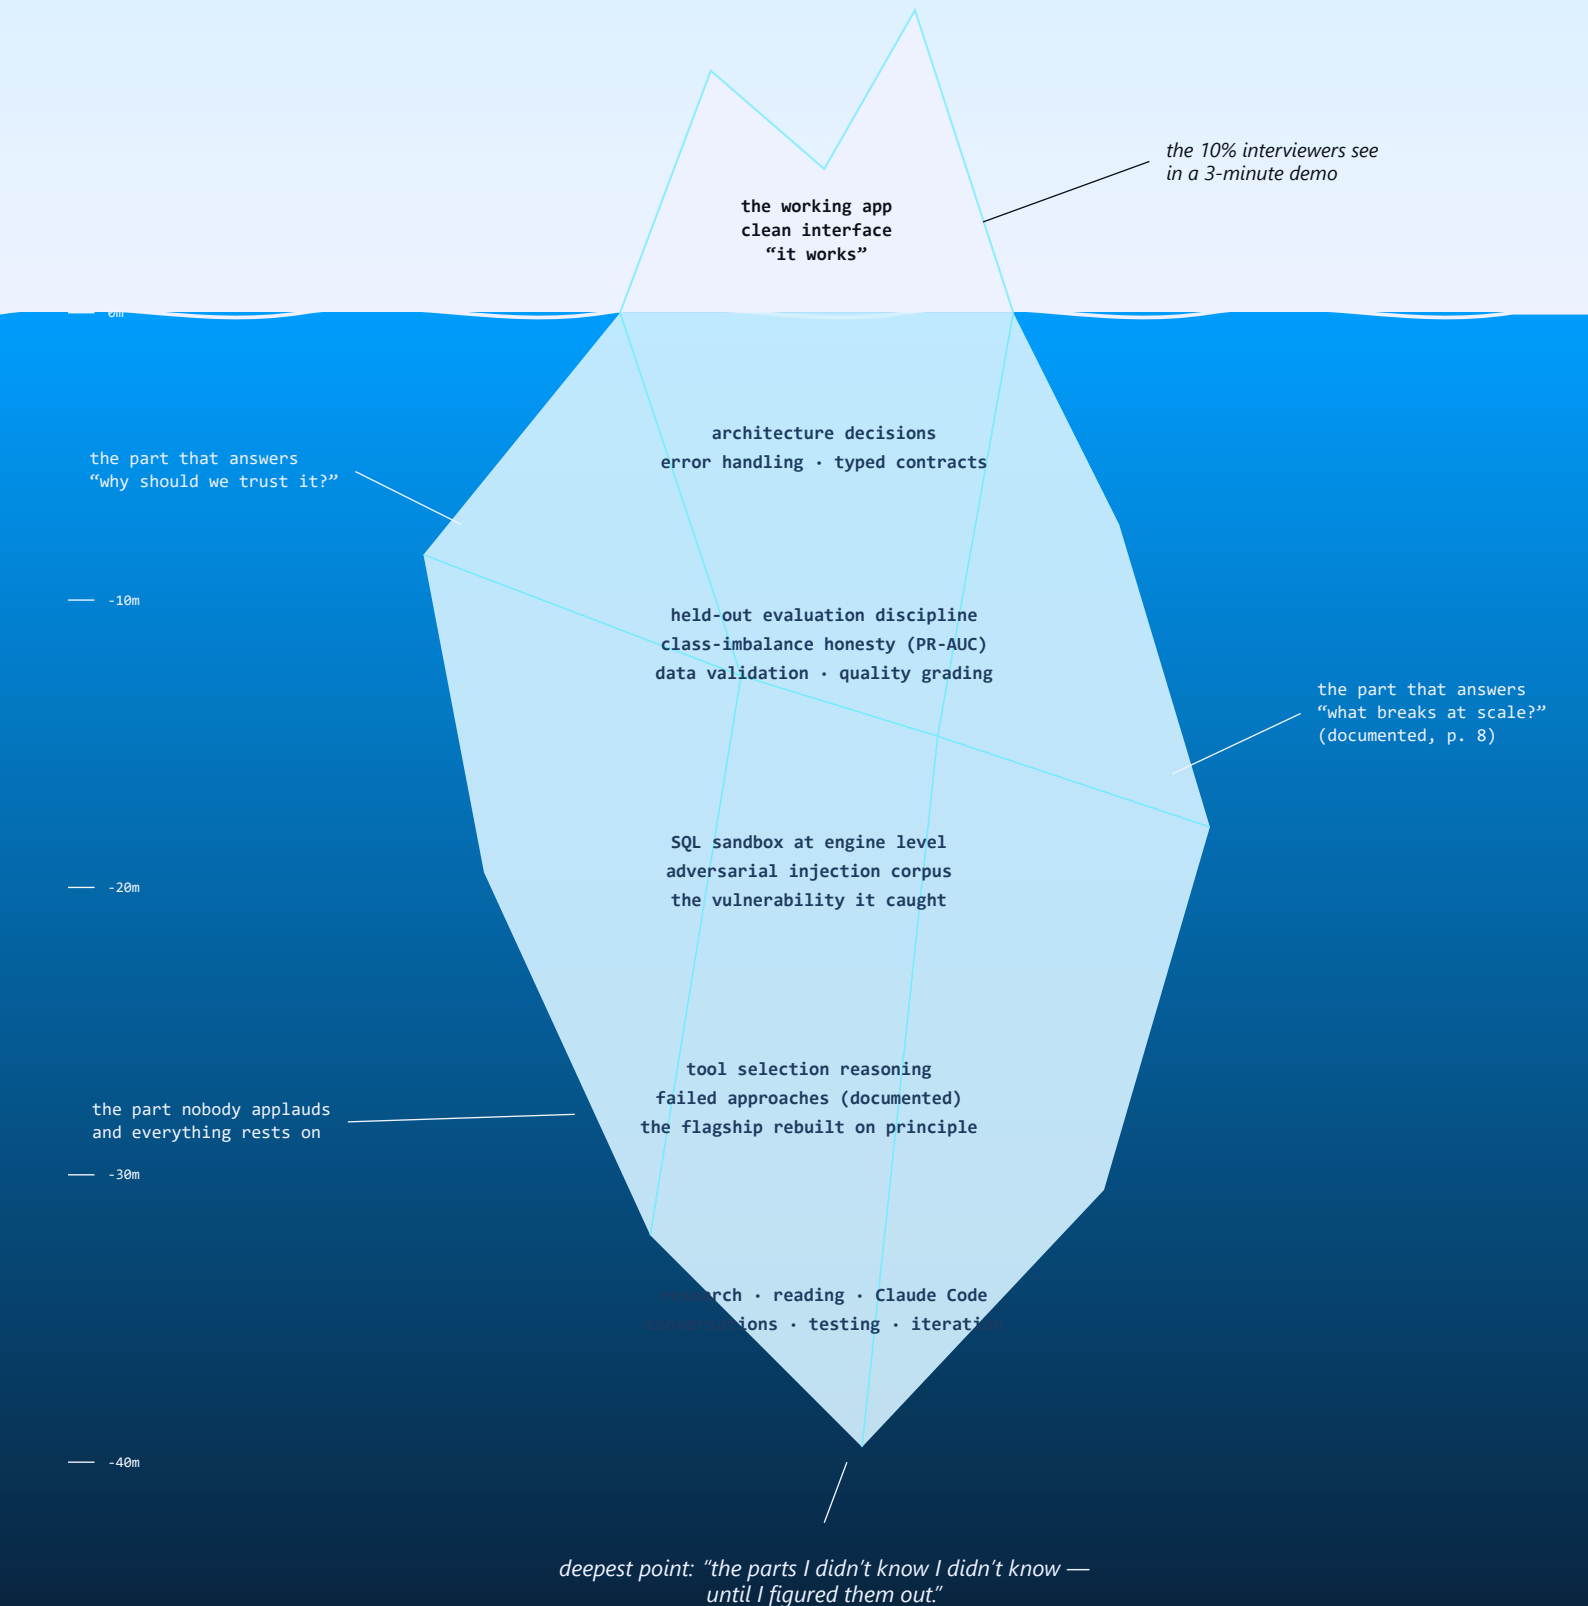

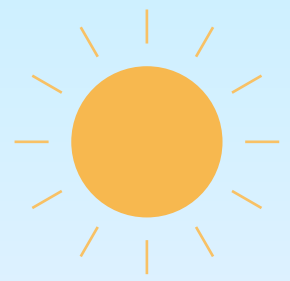

FIELD NOTES — OBSERVED BEHAVIOR IN THE VERITA BUILD

1. Subject drafted the FastAPI scaffolding and ECharts option generators; human reviewed and reshaped every module boundary.
2. Subject was ordered to *attack* the SQL guard; the resulting adversarial corpus caught a real file-read vulnerability. Symbiosis at its finest.
3. Subject proposed a metric “fix” that quietly evaluated on training data. Human immune response: rejected, documented, turned into a war story.
4. Subject explained unfamiliar organs (joblib persistence, additive blending, Welch’s correction) until the human could re-derive them unaided.
5. Every output passed through the review gate: nothing ships that the human cannot explain line-by-line. The brain remains in charge of the body.

Specimen collected in the wild, 2026. No black boxes were harmed — none were permitted to exist.

THE ICEBERG

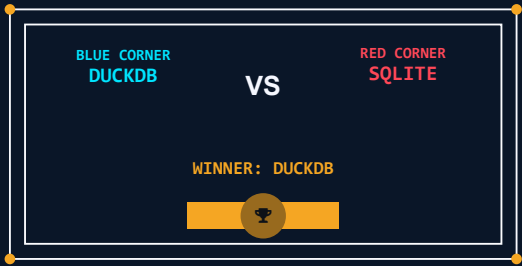

WHAT THE DEMO SHOWS vs WHAT MADE IT TRUE

FIGHT NIGHT

EVERY ARCHITECTURE DECISION SETTLED IN THE RING · JUDGED BY EVIDENCE ONLY

MAIN EVENT: THE SQL ENGINE

BY DECISION: columnar speed, engine sandbox

SQLite is a fine champion of a different weight class. Analytics wants columns; compliance wants enable_external_access=False. Unanimous cards.

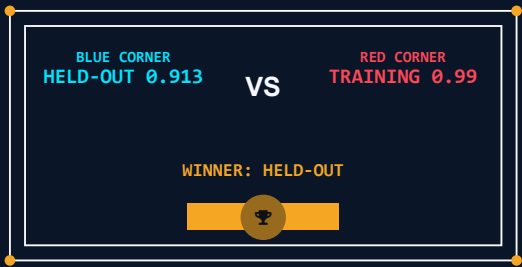

CO-MAIN: THE AGENT'S SOUL

BY DECISION: regulators replay plans, not vibes

The crowd wanted the flashy southpaw. The judges wanted a trace they could re-run in court. Flash sells tickets; evidence wins titles.

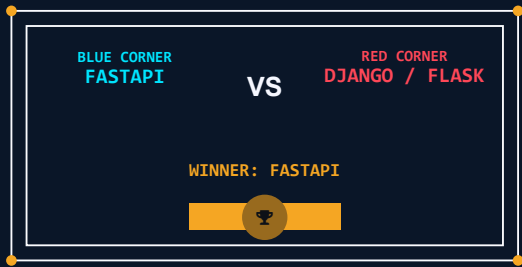

THE METRICS BOUT

BY DECISION: the other guy was doping

Training-set scores test positive for data leakage every time. Stripped of the belt before the first bell. This poster is a warning.

THE FRAMEWORK OPENER

BY DECISION: typed contracts, free documentation

Django brought an ORM nobody ordered; Flask forgot its validation gloves. Pydantic contracts landed clean all night.

THE UNDERCARD

ECHARTS def. RECHARTS
REACT-GRID-LAYOUT def. HAND-ROLLED DRAG
POSTGRES def. MONGODB
3-MODEL TOURNAMENT def. PROPHET (no-show)
GEMINI-OPTIONAL def. GEMINI-REQUIRED

canvas survives 10k points; declarative specs let the backend compose charts
bought physics, spent the week on features instead of collision bugs
audit trails need schemas like courts need transcripts
honest selection beat heavyweight sophistication; rematch offered in V2
no hidden dependencies; the fallback fights every CI night and never loses

IT WORKS.

IT'S DOCUMENTED.

IT'S ALREADY BUILT FOR YOU.

V1 this product – built, tested, shipped
V2 SHAP explanations + model tournament (engines installed)
V3 whatever we build together here
