

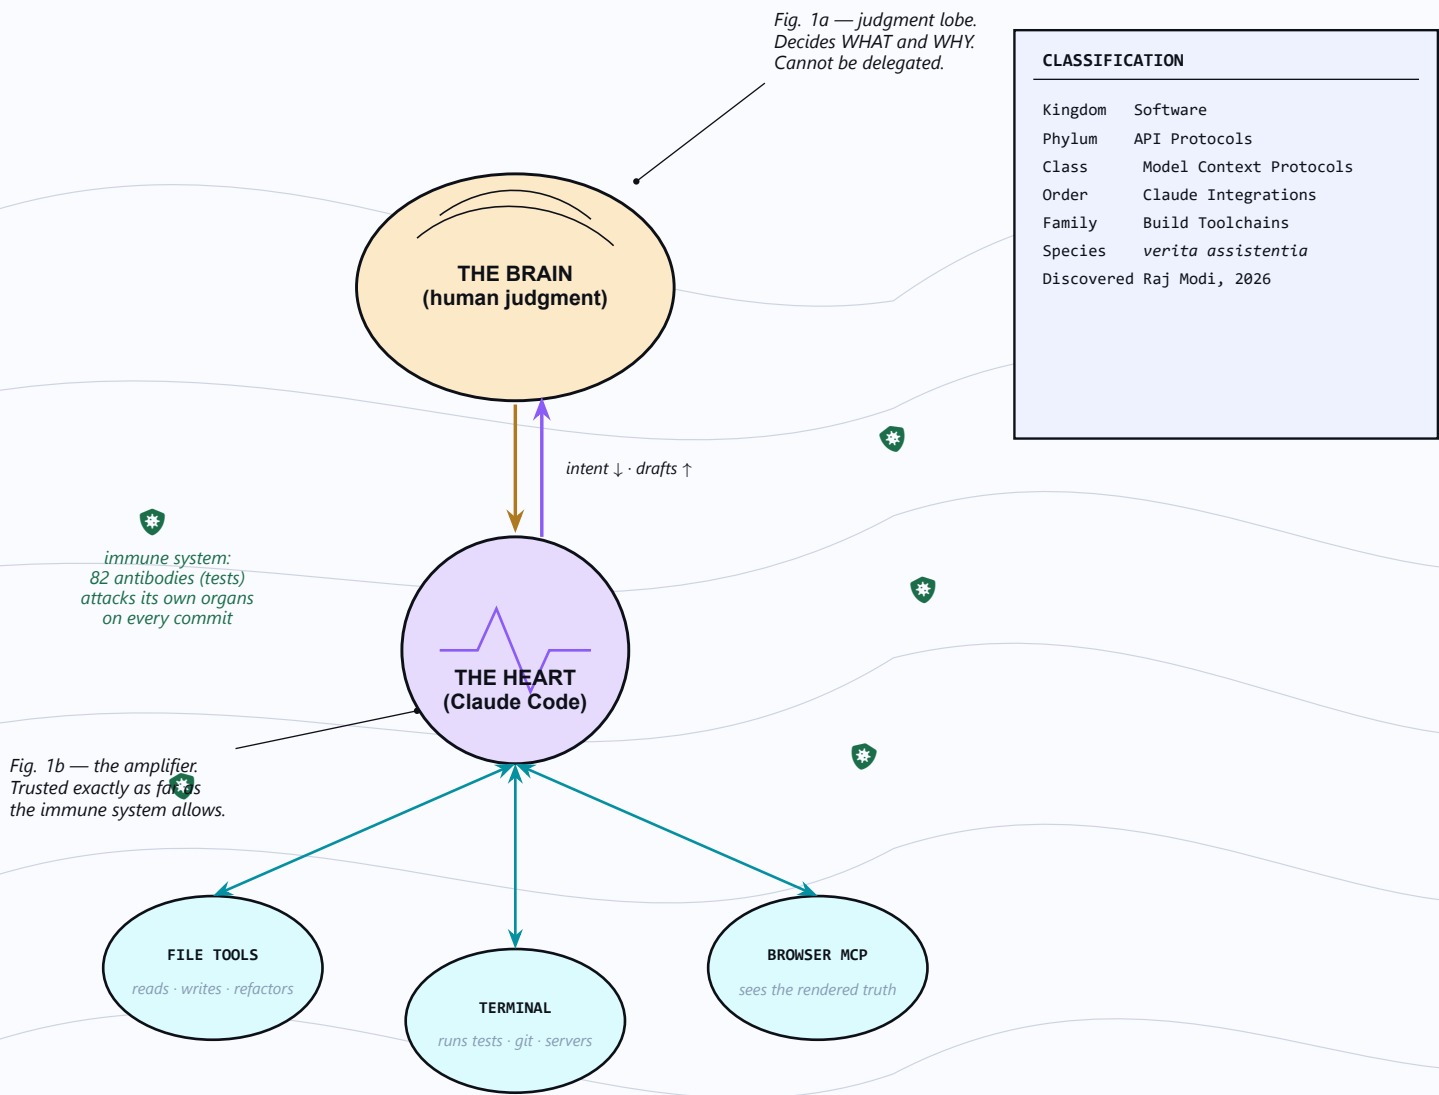

PLATE VII — ANATOMY OF THE AI-ASSISTED BUILD

Fig. 1. The organism in cross-section, with the Model Context Protocol dissected

FIELD NOTES — OBSERVED BEHAVIOR IN THE VERITA BUILD

1. Subject drafted the FastAPI scaffolding and ECharts option generators; human reviewed and reshaped every module boundary.
2. Subject was ordered to *attack* the SQL guard; the resulting adversarial corpus caught a real file-read vulnerability. Symbiosis at its finest.
3. Subject proposed a metric “fix” that quietly evaluated on training data. Human immune response: rejected, documented, turned into a war story.
4. Subject explained unfamiliar organs (joblib persistence, additive blending, Welch’s correction) until the human could re-derive them unaided.
5. Every output passed through the review gate: nothing ships that the human cannot explain line-by-line. The brain remains in charge of the body.

Specimen collected in the wild, 2026. No black boxes were harmed — none were permitted to exist.
