

THE COMPLIANCE TIMES

BEFORE & AFTER EDITION

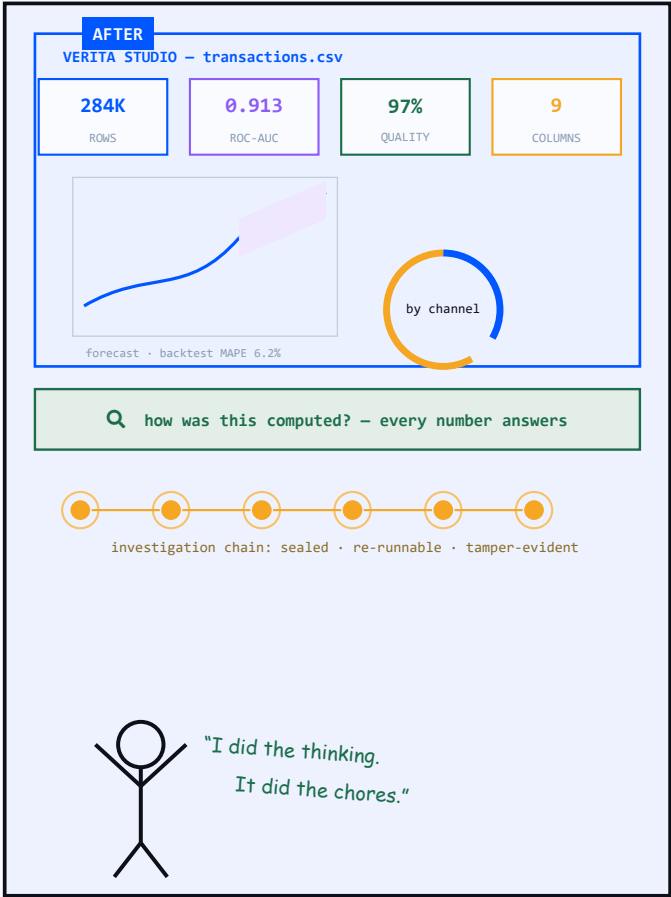

PRICE: ONE FILE DROP

ANALYST'S FIRST HOUR, FOUND DEAD; EVIDENCE EVERYWHERE

[2026] — The Problem (colorized: it was gray in person too)

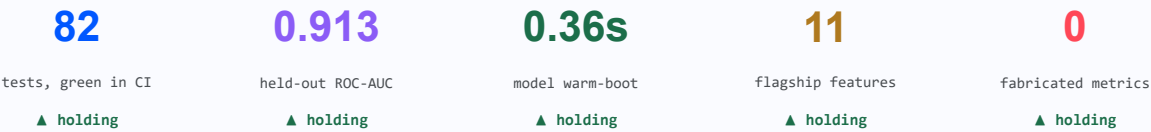

CITY DESK — Witnesses report that the hour formerly spent importing, typing, and formatting data “simply never happened.” A single file drop produced a profiled dataset, an editable dashboard, statistically tested findings, and a forecast carrying its own error rate. “We always suspected the first hour was optional,” said one analyst, requesting anonymity to speak freely about Power BI. “Nobody dared say it.”

[2026] — Same analyst, eleven seconds later. (Actual product behavior.)

REGULATORY DESK — Officials confirm the new system shows its work “compulsively.” Every metric exposes its formula on demand; the AI investigator’s reasoning arrives sealed in a SHA-256 chain that visibly breaks if edited. “Frankly, we’re not used to being trusted this much,” one auditor admitted. “It’s unsettling. We like it.”
