

VERITA

The project, end to end — the human reason on the left, the engineering on the right

THE STORY

“Give the compliance analyst their first hour back — and make every number they report *defensible*.”

- Saw analysts lose *hours* to setup before a single insight.
- Built a tool that profiles, scores & explains a dataset *instantly*.
- Made every figure *defensible* — because compliance legally demands it.

Honest

Auditable

Fast

Not a CV — a working system. Drop a file and watch it profile, score the **fraud** risk, answer questions in plain English, and seal the investigation.

“It doesn’t just log conclusions — it binds them to the data, the code version, and the exact query that produced them.”

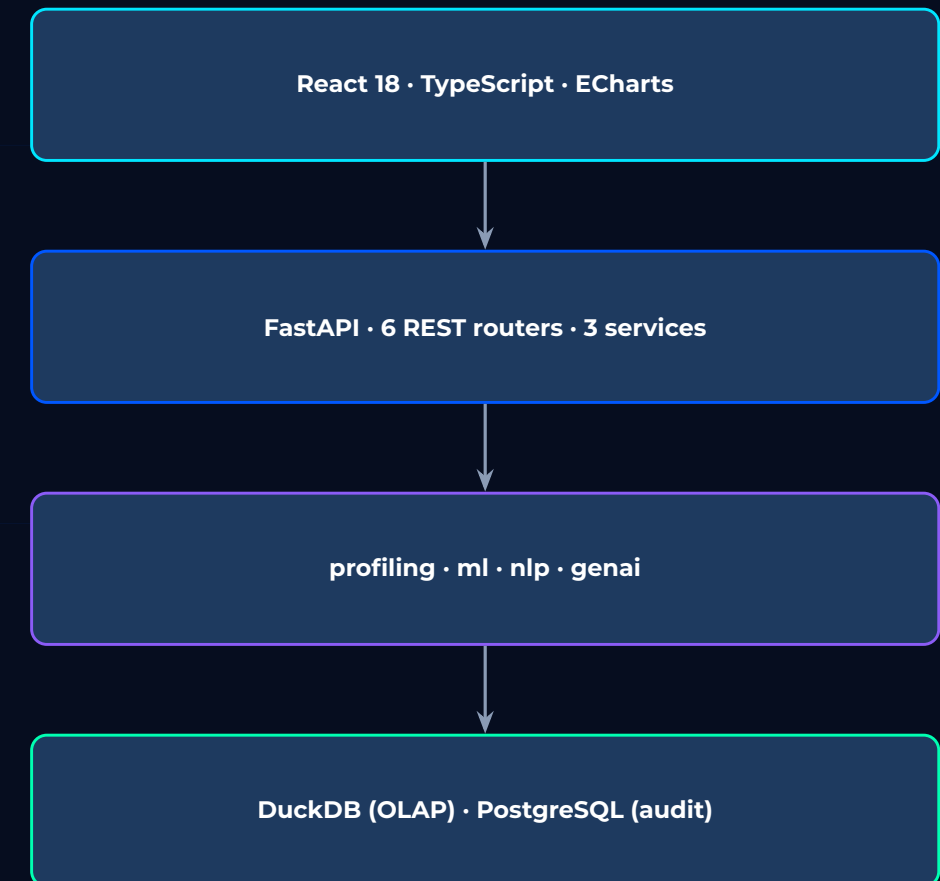

— the design thesis

BUILT FOR WOLTERS KLUWER

THE TECHNOLOGY

upload → profile → score → investigate → seal

Held-out **ROC-AUC 0.913** / **PR-AUC 0.65**; **SHAP** explains every score; every step **hash-chained**.

```
verita - status

$ model loaded in 0.36s (joblib cache)
$ chain verified   $ 0 fabricated metrics
$ all engines deterministic - runs offline
```
